Experiment No 1

Name : Sahil Behera

Roll No:A005 (A1-1)

SAP ID:60017240008

Aim: Develop an informative webpage using HTML5 tags, including various sections, images, and links.

```html
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <title>My Portfolio</title>
    <link rel="stylesheet" href="style.css">
</head>
<body>

    <header>
        <h1>My Portfolio</h1>
        <p>Beginner Web Developer</p>
    </header>

    <section>
        <h2>About Me</h2>
        <p>
            Hello! My name is Shinchan. I am learning HTML and CSS
            and this is my first portfolio webpage.
        </p>
    </section>

    <section>
        <h2>Skills</h2>
        <ul>
            <li>HTML</li>
            <li>CSS (Beginner)</li>
        </ul>
    </section>

    <section>
        <h2>My Project</h2>
        <p>Portfolio Website using HTML</p>
        <a href="https://developer.mozilla.org/en-US/docs/Web/HTML" target="_blank">
            Learn HTML
        </a>
    </section>

    <section>
        <h2>Contact</h2>
        <p>Email: Shinchan@example.com</p>
    </section>
</body>
</html>
```

```css
body {
    font-family: "Segoe UI", Arial, sans-serif;
    margin: 0;
    padding: 0;
    background-color: #eaeaea;
}

header {
    background-color: #1f2933;
    color: white;
    text-align: center;
    padding: 50px 0;
}

section {
    background-color: white;
    margin: 30px auto;
    padding: 25px;
    width: 80%;
    border-radius: 10px;
    box-shadow: 0 4px 10px rgba(0, 0, 0, 0.1);
}

h2 {
    color: #1f2933;
}

ul {
    padding-left: 20px;
}

a {
    color: #2563eb;
    text-decoration: none;
    font-weight: bold;
}

a:hover {
    text-decoration: underline;
}
```

Output:

My Portfolio

Beginner Web Developer

About Me

Hello! My name is Shinchan. I am learning HTML and CSS and this is my first portfolio webpage.

Skills

- HTML
- CSS (Beginner)

Experiment No. 1

Aim: Develop an informative webpage using HTML tags including various sections

1. HTML: (Hyper Text Markup Language)
The structure & content HTML provides the skeleton of webpage. It defines what the elements are, such as headings, paragraphs, images & buttons. It does not handle how they look or how they behave, only that they exist & in what order.

2. Key Functions: Uses "tags" to wrap content (eg. <h1> for main title, <p> for paragraph)

2. CSS: (Cascading Style Sheets)
The presentation & layout CSS controls the visual appearance of the HTML elements. without CSS, every website would look like a plain text document with black text on a white background.

Key functions: Selects HTML elements & applies rules (eg: color: red, font-size: 16px)

3. Javascript (JS)
The behaviour & interactivity Javascript is the programming language that makes the website dynamic. It handles user actions, logic and data updates without needing to refresh the page.

• Key function: It listens for events (clicks, scrolling, typing) & executes code in response.

Eg code:

HTML:
```
<button id: " myButton" class = " styled.btn" >
Click Me </button>
```

CSS:
```
. styled . btn {
background - color: blue ;
color: white ;
padding - 50px, 100px ;
border - radius: 5px ;
}
```

Javascript:
```
document.get ElementBy Id (" myButton"). addEvent Listener
("Click", function () {
alert (" You clicked the button");
});
```
